

Micromax™ PE410

Electronic Inks and Pastes

Ink-Jet Silver Conductor

Micromax™ PE410 is a new silver ink-jet ink from Micromax™ Advanced Materials enabling rapid digital prototyping and high volume production in applications with demanding requirements for conductivity, thickness, smoothness and line resolution. Micromax™ PE410 ink-jet silver ink displays the stable jetting performance needed for high volume non-contact, digitally printed metallizations in applications such as touch panels, solar cells, OLED lighting and printed antennae. Micromax™ PE410 has a low sintering temperature suitable for printing on PET and shows good chemical compatibility and adhesion on multiple surface types or organic layers.

Product benefits

- Outstanding electrical conductivity
- Outstanding electrical conductivity
- High print thickness for ink-jet process
- Excellent adhesion to various substrates
- Smooth sintered surface

Product information

Colour	Brown ^[1]
Solid content	45.2 ^[2] %
[1]: Dark Blown	
[2]: 150 °C	

Rheological properties

Viscosity	0.02 - 0.04 ^[3] Pa.s
[3]: Bohlin, cone and plate 1 °, 40mm, 25 °C	

Application technique

Drying time	20 min
Drying temperature	130 °C

Electrical properties

Surface resistivity	≤5 ^[4] mOhm per square
---------------------	-----------------------------------

[4]: at 25µm & 130 °C, in the case of at 150 °C, ≤4, at 190 °C, ≤3

Micromax™ PE410

Electronic Inks and Pastes

Storage and stability

Shelf life

6^[5] months

[5]: refrigerated $\leq 5^{\circ}\text{C}$

Additional information

How to use

Processing

- **Substrates**
 - PET (eg. Melinex® ST504), glass, PEN, ITO
- **Handling recommendation**
 - Shake well before use
 - If sedimentation occurs, jar roll for 60 minutes or planetary centrifugal mix for 10 seconds at 2000 rpm
- **Ink-Jet printing**
 - PiXDRO LP50 with Konica Minolta print head (512S)
 - FUJIFILM Dimatix Material Printer
 - Printing should be performed in a clean, well-ventilated area. Optimum printing characteristics are generally achieved when the room and ink container temperatures are in the 20-23°C range.
- **Typical circuit line thickness**
 - Printed with DMCLCP 10 pl with drop spacing 30
 - ~ 500 nm for 1 px line
 - ~ 1.5 μm for 20 px line
- **Drying**
 - Box oven : 130°C for 20 minutes (substrate dependent)

Properties

Physical Properties

Test	Properties
Abrasion Resistance, Pencil Hardness (ASTM D3363) [H]	3

Information in this datasheet shows anticipated typical physical properties for Micromax™ PE410 based on specific controlled experiments in our labs and are not intended to represent the product specifications, details of which are available upon request.

Storage and shelf life

Containers should be stored, tightly sealed, in a clean, stable environment at refrigerated condition (0~5°C). Shelf life of material in unopened containers is six months from date of shipment with refrigerated storage condition (5°C). Some

Micromax™ PE410

Electronic Inks and Pastes

settling of solids may occur and compositions should be thoroughly mixed prior to use.

Safety and handling

For safety and handling information pertaining to this product, read Safety Data Sheet (SDS).

NOTICE TO USERS: Values shown are based on testing of laboratory test specimens and represent data that fall within the standard range of properties for natural material. These values alone do not represent a sufficient basis for any part design and are not intended for use in establishing maximum, minimum, or ranges of values for specification purposes. Colourants or other additives may cause significant variations in data values. Properties of moulded parts can be influenced by a wide variety of factors including, but not limited to, material selection, additives, part design, processing conditions and environmental exposure. Other than those products expressly identified as medical grade (including by MT® product designation or otherwise), Celanese's products are not intended for use in medical or dental implants. Regardless of any such product designation, any determination of the suitability of a particular material and part design for any use contemplated by the users and the manner of such use is the sole responsibility of the users, who must assure themselves that the material as subsequently processed meets the needs of their particular product or use. To the best of our knowledge, the information contained in this publication is accurate; however, we do not assume any liability whatsoever for the accuracy and completeness of such information. The information contained in this publication should not be construed as a promise or guarantee of specific properties of our products. It is the sole responsibility of the users to investigate whether any existing patents are infringed by the use of the materials mentioned in this publication. Moreover, there is a need to reduce human exposure to many materials to the lowest practical limits in view of possible adverse effects. To the extent that any hazards may have been mentioned in this publication, we neither suggest nor guarantee that such hazards are the only ones that exist. We recommend that persons intending to rely on any recommendation or to use any equipment, processing technique or material mentioned in this publication should satisfy themselves that they can meet all applicable safety and health standards. We strongly recommend that users seek and adhere to the manufacturer's current instructions for handling each material they use, and entrust the handling of such material to adequately trained personnel only. Please call the telephone numbers listed for additional technical information. Call Customer Services for the appropriate Materials Safety Data Sheets (MSDS) before attempting to process our products.
