TECHNYL PROTECT A 50X1 GY 2670 LP

(Previously TECHNYL A 50X1 GREY 2670 LP)

TECHNYL PROTECT A 50X1 GY 2670 LP is an unreinforced blend of polyamide 66 and 6 based on a non-phosphorous and non-halogenated flame retardant system, heat stabilized, for injection moulding. This flame retardant grade, UL94 V0 at 0.4mm, offers excellent filling qualities together with good stiffness. This grade has been designed to be laser printable.

General

Feature	halogen free flame retardant	
Polymer type	(PA66 + PA6) blend	
Processing technology	Injection molding	
Certification	UL-Yellow Card	European Railways Certifications EN 45545-2
Applications	Connectors	Electrical/Electronic Applications
Colors available	Natural	Grey
Forms	Pellets	

Product identification

ISO 1043 abbreviation	PA66+PA6 FR(30)
ISO 16396 designation	PA66,0FR(30)0,M1,S14-040

Condition	Standard	Unit	Value

Processing conditions

Drying temperature/time	80 °C
Suggested max moisture	0.12 %
Rear temperature	260 - 270 °C
Middle temperature	265 - 275 °C
Front temperature	265 - 275 °C
Recommended mould temperature	60 - 80 °C

Injection notes

The material is supplied in airtight bags, ready for use. In case that the virgin material has absorbed moisture, it must be dried with a dehumidified air drying equipment, dew point minimum -20°C. Recommended time 2-4h.

Injection advice

All reinforced, flame retardant compounds generate some level of abrasion/corrosion to the steel processing equipment. These issues may be magnified by using incorrect processing conditions (temperatures, residence time, moisture level ...) during the moulding process. Therefore, Domo recommends you adhere to the processing conditions detailed in this technical data sheet. For equipment that comes into contact with molten flame retardant compounds, Domo advises you to use a steel with high chromium and high carbon content (having a minimum concentration of 16% chromium) to prevent corrosion and abrasion. For the correct reference of steel associated to flame retardant compounds' processing, please refer to your equipment manufacturers. In the case of high requirements on surface quality a mould temperature of up to 120°C can be considered. The processing parameters like processing temperatures are a recommendation and can be adjusted in function of injection machine size, part geometry / design.
