TECHNYL STAR AF 60SX V30 ORANGE 2703
(Previously TECHNYL XA 1573 ORANGE 2703)

TECHNYL STAR AF 60SX V30 ORANGE 2703 is a high flow polyamide 66 based on a non halogenated flame retardant system, reinforced of 30% of glass fiber, for injection moulding. This product has been specifically designed to resolve the problematic of exudation and/or blooming depending on the usage of the parts. In addition, this product is a non-halogenated flame retardant grade with a complete yellow card included full RTI down to 0.8mm, 5VA @ 1.5mm and f1 rating. This product is as well easy to mould. This product offers his best benefit for all Electrical protection devices and not limited too, such as well connectic and photovoltaic application.

General

Feature	UL V0 Very high flow Low blooming	Halogen and red phosphorus free flame retardant Excellent surface finish
Polymer type	PA66 (Polyamide 66)	
Processing technology	Injection molding	
Certification	UL-Yellow Card	EC 1907/2006 (REACH)
Applications	Connectors	Electrical/Electronic Applications
Colors available	Orange	
Forms	Pellets

Injection notes

The material is supplied in airtight bags, ready for use. In case that the virgin material has absorbed moisture, it must be dried with a dehumidified air drying equipment, dew point minimum -20°C. Recommended time 2-4h.

Injection advice

All reinforced, flame retardant compounds generate some level of abrasion/corrosion to the steel processing equipment. These issues may be magnified by using incorrect processing conditions (temperatures, residence time, moisture level ...) during the moulding process. Therefore, Domo recommends you adhere to the processing conditions detailed in this technical data sheet. For equipment that comes into contact with molten flame retardant compounds, Domo advises you to use a steel with high chromium and high carbon content (having a minimum concentration of 16% chromium) to prevent corrosion and abrasion. For the correct reference of steel associated to flame retardant compounds' processing, please refer to your equipment manufacturers. In the case of high requirements on surface quality a mould temperature of up to 120°C can be considered. The processing parameters like processing temperatures are a recommendation and can be adjusted in function of injection machine size, part geometry / design.
