Tenite™ Propionate 383A2R30012, Natural, Trsp

Application/Uses

- Oral hygiene
- Plastics for hygiene feminine products
- Recreational
- Toothbrushes

Product Description

Tenite™ cellulosic plastics are noted for their excellent balance of properties - toughness, hardness, strength, surface gloss, clarity, and a warm feel. The mechanical properties of Tenite™ cellulosic plastics differ with plasticizer levels. Lower plasticizer content yields a harder surface, higher heat resistance, greater rigidity, higher tensile strength, and better dimensional stability. Higher plasticizer content increases impact strength. Tenite™ cellulosic plastics are available in natural, clear, selected ambers or smoke transparents and black translucent. Color concentrates are available in let-down ratios from 10:1 to 40:1. Tenite™ Cellulose Acetate Propionate 383-12 contains a mold release and has a plasticizer level of 12%. It is resistant to high temperatures.
