

Eastman Tritan™ MXF copolyester

The right plastic for healthcare. Now.

EASTMAN

*Introducing a portfolio of four new medical polymers for **housings** and **hardware***

We listened to professionals throughout the healthcare industry who are working to solve the problem of healthcare associated infections (HAIs). Eastman Tritan™ MXF copolyesters continue to set the bar for durability after disinfection in healthcare. Our four new polymers for housings and hardware meet the needs of the healthcare industry and have the properties you need today, including:

- Measurable chemical resistance to a wide range of commonly used disinfectants and wipes
- Higher flow (easier to fill complex tooling)
- Excellent impact strength
- Outstanding aesthetics
- Fully compounded stable colors
- Similar shrinkage to PC/ABS
- UL 94 V-2 flame resistance rating

Tritan MXF polymers enabled Mindray to extend its warranty from one to five years on all patient monitors in North America.

One portfolio of polymers. Many disinfectant options.

EASTMAN

The healthcare industry needs equipment and devices that can be cleaned with the disinfectants they use every day. Based on Eastman's internal testing, Tritan MXF copolyesters have shown good results with more than 30 disinfectants. And the list keeps growing. Contact your Eastman representative to initiate testing with any disinfectants you would like to see added to the list.

Take the next step in preventing HAIs.

Help the healthcare industry improve outcomes and lower costs with easier-to-clean, more durable devices. For more information, contact your Eastman representative.
