14.6. Special precautions for user

Special transport precautions : According to dangerous goods transport legislations, ADR (road transport), RID (rail transport), IMDG (maritime transport), EPS is classified in class of danger "9", labeled as UN 2211 "Polymeric beads expandable, evolving flammable vapours", it belongs to the "product group III" for the packaging requirements; the octabins are designed in accordance to "IBC08 type 11G" specifications and are labeled accordingly. For road domestic transport, it is recommended that closed containers of boxes are avoided. Tilt trailers and curtain side trailers are recommended since ventilation is good. Load must be properly secured within the trailer (ADR refers to the European union recommendations). For ADR, the tunnel codes are D/E, two orange placards are required (one in front and one on the back of the vehicle), for groupage it is forbidden to mix EPS with the products of class 1 (explosive substances) nor with food and transshipments are not recommended (cfr ADR 1.4.3 requirements). For rail any type of wagon with side doors can be used. Checks to ensure adequate ventilation are recommended. Special attention should be paid to secure the goods inside the wagons and to avoid damage to the packaging. Fixed sections are helpful since the forces (eg. shunting) in rail transport can be much greater than those in road transport. Refer to RID for signals and other restrictions. For sea, closed deep sea containers are not allowed for UN 2211 (cfr IMDG SP965), deep sea containers must be either ventilated, open-top or "in one door off operation". In case of ventilated containers, the inlets and the outlets should extend along the full length of the container. The ventilation area at the bottom or roof of the container should cover a minimum of 500 cm² for a 20 foot container and 1000 cm² for a 40 foot container. At each access point, a warning including the words "CAUTION – MAY CONTAIN FLAMMABLE VAPOUR" should appear in lettering 25mm high. The sign shall remain on the cargo transport until it has been completely ventilated to remove any hazardous concentration of vapour or gas, and until the immediate vicinity of the cargo transport unit is clear of any source of ignition, and until the goods have been unloaded. A DGD (dangerous declaration form) must be issued to the forwarding agent so that the shipping line takes adequate stowing measures. A CPC (container packaging certificate) must be issued at container loading. Four placards n°9 and UN 2211 must be applied on the 4 sides of the container or of the semi-trailer (Guidelines for Transport and Storage of Expandable - www.plasticseurope.org)

- Overland transport
