KOPPS[®] Series

KOPPS[®] Series is one kind of SUPER Engineering Plastics beyond the performance of Engineering Plastics. It is mainly used for precision parts that require the high dimension stability. The property of low absorption of the product whose value is close to '0' makes the high quality of the dimension stability after injection with the excellent melt viscosity. Also, its special property of the high and consecutive using temperature and self-extinguishing character extends the range of the usage for the part of the car, electric and electronic industry that require the high heat resistance and the flame resistance.
